

# Using AFM

---

When using flowing text, Prawn will position text starting font.ascender below the baseline, and leave the y-cursor at the baseline of the next line of text

---

When using text positioned with :at, the baseline is used (and the Y-cursor is not moved)

---

## Calculations Demo

ASCENDER  
DESCENDER  
LINEGAP  
FONT\_HEIGHT

The quick brown fox jumps over the lazy dog.

# Using TTF

---

When using flowing text, Prawn will position text starting font.ascender below the baseline, and leave the y-cursor at the baseline of the next line of text

---

When using text positioned with :at, the baseline is used (and the Y-cursor is not moved)

---

## Calculations Demo

ASCENDER  
DESCENDER  
LINEGAP  
FONT\_HEIGHT

The quick brown fox jumps over the lazy dog.
